

## Post – 2017 Hoover Power Allocation

Chuck Moore  
Chief Executive Officer  
October 30, 2012

- NEC has an All Power Requirements Contract with Public Service Company of New Mexico
- NEC is not a member of AEPCO
- NEC supports the AEPCO Presentation
- NEC was incorporated in 1946
- Headquarters are located in Lakeside
- 8 Member Elected Board of Directors

- Over 10,000 square mile Service Territory
- As of December 2011 NEC:
  - had 32,948 members and served 40,042 meters
  - 264 miles of 69kV sub-transmission lines
  - 3,219 miles of 24.9kV distribution lines
  - 411,666,676 kWh sold
  - PNM Coincident Demand of 87.2 MW
  - System Peak Demand of approximately 93 MW

- Present average retail rate is \$0.12/kWh
- Serve rural areas and rural communities
- NEC's loads consist of rural, irrigation, residential, and small municipals
- Small municipals served by NEC include water and wastewater loads
- NEC also serves small water districts and sanitation districts
- NEC's loads are very similar to the Electric Districts and Irrigation District loads

- Rural Communities served include:
  - Pinetop-Lakeside
  - Heber-Overgaard
  - St Johns
  - Springerville
  - Eager
  - Alpine
  - Nutrioso
  - White Mountain Apache Tribe
    - Whiteriver
    - Cibecue
    - McNary

1. What resources would you seek?
  - Hoover “A”, “B”, “D” or any combination
  - NEC is flexible on transmission and delivery locations
2. What do you plan to do with the Hoover power allocated to your system?
  - Irrigation
  - Water and Wastewater
  - Residential and commercial
3. How much Hoover power would you require?
  - An equitable share to be used for our rural loads
4. How much federal power do you currently receive?
  - NEC members do not presently receive any Hoover allocation or CAP water

5. How do you think the Hoover power should be allocated?
  - In accordance with the law “in an equitable manner so as to render the public service and at levels calculated to encourage the widest practical use of electrical energy.”
- NEC is a winter peaking load system. We would encourage the Arizona Power Authority to think outside the box and look at the possibility of allocating Hoover power on a seasonal basis.

Thank You for your time.
