Subject: Comments A, B and D2 Power

This is being sent on behalf of Avra Valley Irrigation & Drainage District by John Kai, Jr. it's district president.

AVIDD (Avra Valley Irrigation and Drainage District)

Avra Valley Irrigation District is converting many of its' wells from natural gas to an electric supply. We are requesting electric power to supply this demand for irrigated agricultural commercial crop purposes. We currently only have B power, which is insufficient for our present and future needs. As a district applying for A, D2 and additional B power, will we be treated on the same basis as existing districts that already have A and B power?
